Introduction

The Snapshot Report is issued annually and shows major demographic characteristics and outcomes for families with children and single adults experiencing homelessness in our community. Programs funded by Community Shelter Board serve the majority of households experiencing homelessness in our community. The Snapshot Report includes sections specific to veteran homelessness and transitional age youth homelessness.

Data includes trend information over calendar years 1995 – 2016. All data in the Snapshot Report were retrieved from the Columbus Service Point homeless management information system, operated by Community Shelter Board. This database, created in 2001, includes a variety of client-level information, including intake and exit, outcomes, demographics and general household information.

Who We Are

Community Shelter Board leads a coordinated effort to both prevent and end homelessness every day, while also assuring the immediate needs of those experiencing homelessness in Columbus and Franklin County are met. Our primary roles are to prevent homelessness when possible, ensure safe emergency shelter when needed, rapidly re-house and stabilize families and individuals experiencing homelessness, provide affordable, supportive housing, and advocate for policies and resources to end homelessness in our community.

As the community's collective impact organization for ending homelessness, Community Shelter Board brings together 16 agencies across the community to work together as a cohesive system for change. Community Shelter Board oversees an annual budget of \$30.7 million to support homeless programs and housing services focused on homelessness prevention, emergency shelter, street outreach, rapid re-housing, and permanent supportive housing. Last year, these programs served more than 12,000 people.

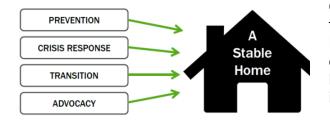

Community Shelter Board has gained a reputation as a change-leader. We are known for strong accountability toward outcomes and for holding ourselves and our partners to high standards. We make decisions based on data and use collaborative processes that are transparent. The CSB model has received local and national recognition as a national best practice.

Community Shelter Board is funded by the City of Columbus, the Franklin County Board of Commissioners, the United Way of Central Ohio, The Columbus Foundation, Nationwide Foundation, American Electric Power Foundation, the U.S. Department of Housing and Urban Development, the State of Ohio, and other public and private investors.

Our Approach

Community Shelter Board leads the implementation of our community's plan to end homelessness, a comprehensive and targeted set of strategies to respond to homelessness in our community. We make an impact in three ways: 1) collaborating to bring together diverse organizations to work as an efficient system, rather than as a fragmented set of resources; 2) employing an outcome-based funding model that measures performance, monitors programs' success, and assures the system's effectiveness as a whole; and 3) combining innovative solutions and best practices with time-tested strategies to implement programs that quickly and stably house people in crisis. In short, CSB delivers optimization of the homeless system.

Using our nationally-recognized model we work on the full scope of homelessness priorities: linking people at imminent risk of homelessness to community resources; helping people address their immediate housing crisis; moving people from crisis to stability; and advocating for policies and resources to end homelessness. This work is organized into four broad goals:

Community Shelter Board's partner agencies are on the forefront providing services. Community Shelter Board staff work closely with partner agencies to continue quality improvements and achieve system benchmarks. We are continuously striving for innovation and impact.

ACCESS

People at imminent risk of homelessness are linked to community resources.

Prevention: Families on the brink of homelessness are connected to work and job training, tenant education, and relocation services to quickly resolve the housing crisis and keep them stably housed. Families receive temporary utility and rent assistance to retain their housing.

Gladden Community House and Lutheran Social Services provide families with work and job training referrals, tenant education, temporary utility and rent assistance, and relocation services when needed to quickly resolve the housing crisis. This program is funded by the Siemer Institute for Family Stability through United Way of Central Ohio.

Homeless hotline: HandsOn Central Ohio operates a homeless hotline where calls are answered 24 hours a day. Hotline operators help people identify and secure an option other than a shelter bed if possible, to preserve resources for those whose only option is shelter. Those with no other resources are connected to emergency shelter.

Hands On

CRISIS RESPONSE

People experiencing homelessness receive assistance to address their immediate housing crisis.

Street outreach: The Maryhaven Collaborative Outreach Team delivers outreach support services to people who are unsheltered. This can include people living on the street, the land, public parks, under bridges, in vehicles and abandoned buildings. Services include:

- Assertive outreach at sites where homeless persons congregate
- Pro-active engagement
- Control Con
- Access to benefits and rental assistance
- Keferral to medical and behavioral healthcare
- Connections to employment and material resources
- Connections to warming and cooling stations during extreme temperatures
- Support and assistance during city and county-led camp remediation

Maryhaven facilitates collaboration among a broad group of providers and stakeholders who form a multi-disciplinary team providing integrated street outreach services. These include providers delivering mental health and substance abuse treatment, physical healthcare, health education, veteran-specific services, shelter and housing.

Emergency shelter: Emergency shelter is provided for men, women, and families at several sites throughout Columbus and Franklin County. Emergency shelters provide a safe, dignified environment. Shelter operators work to help people end their homeless crisis quickly, connecting people to employment and job training, support services, medical care and housing resources. They also work in partnership with rapid re-housing case managers for those who need more intensive support to overcome barriers and get back on the road to self-sufficiency.

TRANSITION

People experiencing homelessness transition from crisis to stability.

Rapid Re-Housing: People experiencing homelessness are helped to move out of shelter quickly and into their own apartments. Case managers link people to employment and job training, support services, medical care and housing resources focused on ending the homeless crisis quickly and stabilizing people in housing. Case managers develop relationships with landlords and advocate on behalf of people seeking housing. They also help people apply for rent and utility assistance and continue working with people after they are housed to provide support to maintain stable housing.

For single adults, rapid re-housing services are delivered by YMCA of Central Ohio. For families, services are delivered by the Homeless Families Foundation, the Salvation Army and Volunteers of America of Greater Ohio.

Direct client assistance: People exiting emergency shelters or experiencing street homelessness receive short-term financial assistance from CSB for rent and utility costs.

Transitional housing: Transitional housing is not permanent housing but it has a longer length of stay than shelter. Columbus has transitional housing programs for youth age 17-19, veterans and women with chronic alcohol and/or substance abuse/dependence. Programs range between 2 months and 24 months in length, while residents receive peer and professional support and 24-hour supervision. Services include housing, life skills assistance, alcohol and drug treatment, mental health care and physical health care.

Permanent supportive housing: People experiencing chronic, long-term or repeated homelessness who have disabilities receive subsidized housing coupled with health care, employment services and other supports. By developing permanent supportive housing, CSB has made a major impact in addressing long-term homelessness, saving costs for jails, emergency room visits and inpatient hospital stays.

Data Snapshots

Calendar Year Trends – Crisis Response

The charts in this section focus on analysis across the ten most recent calendar years for the emergency shelter systems, youth shelter, transitional housing and outreach programs.

Households Served

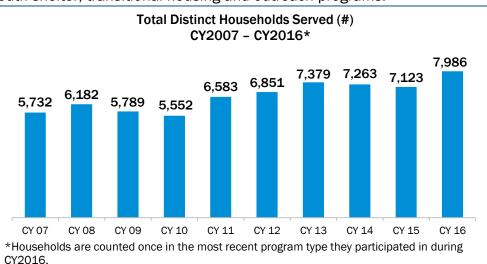

During CY2016, 7,986 distinct households were served in emergency shelter, youth shelter, transitional housing, and street outreach programs. The overall number of households served increased 12 percent (863 households) from CY2015. This is the first time that youth shelter numbers have been included, adding 415 households to the count.

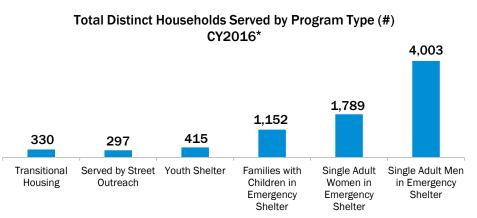

Distinct Households Served by Program Type

Fifty percent of homeless households served in CY2016 were single adult men served in emergency shelters. More single women (6 percent increase) and single men (16 percent increase) and less families (16 percent decrease) were served in emergency shelters than last year.

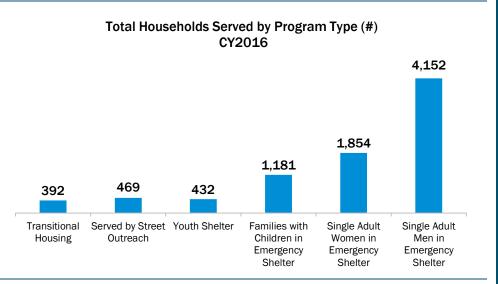

Total Households Served by Program Type

1,181 family households were served in CY2016, representing a 16 percent decrease from last year. The majority of families, 92 percent, lived in Franklin County prior to becoming homeless. Eighty-three percent of single men and 86 percent of single women lived in Franklin County prior to becoming homeless.

*Households are counted once in the most recent program type they participated in during CY2016.

Persons Served

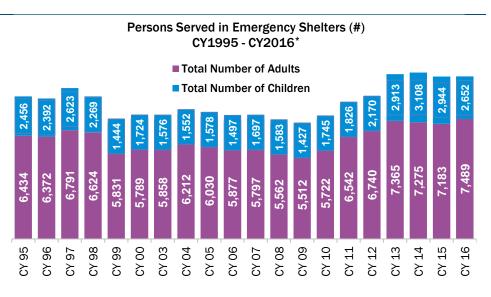

During CY2016, 7,489 adults and 2,652 children in families experienced homelessness and were served in emergency shelters; this represents an increase of 4 percent since last year for adults and a 10 percent decrease for children. For the fourth consecutive year, the number of homeless individuals in our community exceeded 10,000.

Households Served by Age Group

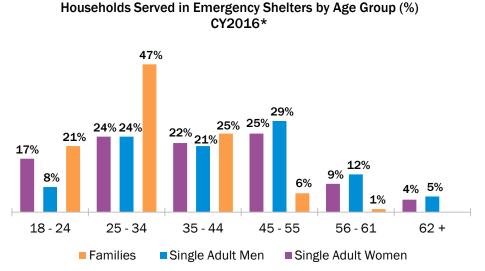

In CY2016, 47 percent of homeless households served in the family emergency shelters were between the ages of 25-34. The age group with the largest representation of both men (29 percent) and women (25 percent) served in single adult emergency shelters is 45-55. This is consistent with prior years' findings.

Average Length of Stay

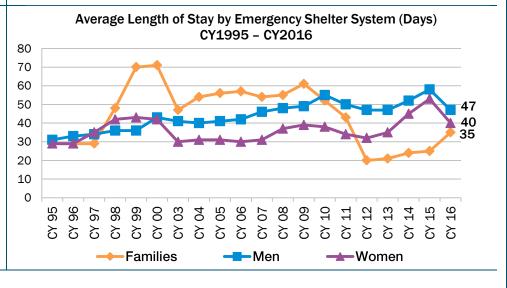

Average length of stay in the emergency shelter for families increased to 35 days, from the previous 25 day average. The average length of stay decreased to 47 days for men, and 40 days for women. This measure is cumulative for the calendar year.

*Excludes Huckleberry House Emergency Shelter and family overnight programs, total persons served including the youth shelter and overnight is 10,702.

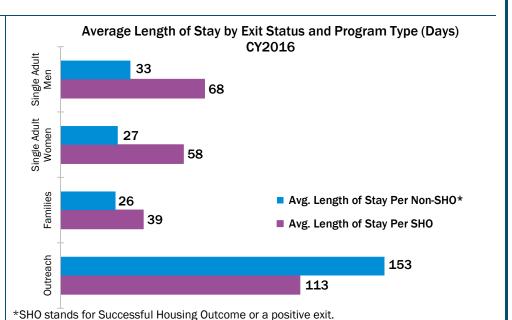

*Households counted once in the most recent program type they participated in during $\ensuremath{\mathsf{CY2016}}$.

communityshelterboard SNASHOT REPORT

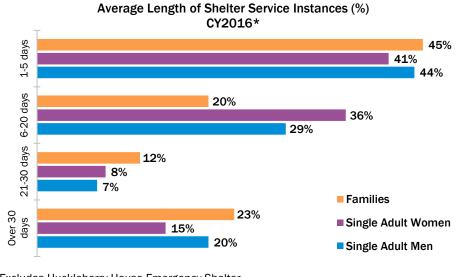

Average Length of Program Stay by Exit Status and Program Type

For all emergency shelter populations, length of program stay was longer if the outcome was a successful exit. Among successful exits, the length of stay in single adult shelter programs significantly decreased when compared to the previous year.

Average Length of Service Instances

Approximately 81 percent of households exited shelter within 30 days of entry. Forty-four percent of single adult men and 41 percent of women exited shelter within 1–5 days of entry.

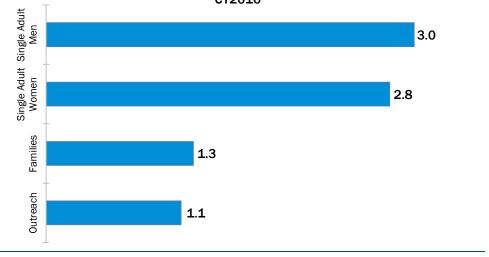

*Excludes Huckleberry House Emergency Shelter,

Average Number of Service Instances

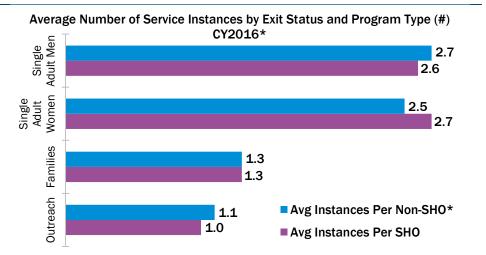

During CY2016, single adult men had an average of 3.0 services, an increase of 0.5 from last year, while single adult women had an average of 2.8 services, an increase of 0.6 from last year. Families and Outreach have an average of just over one service per household per year.

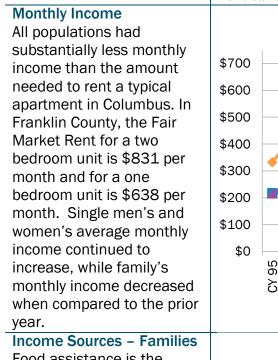

Service Instances by Exit Type

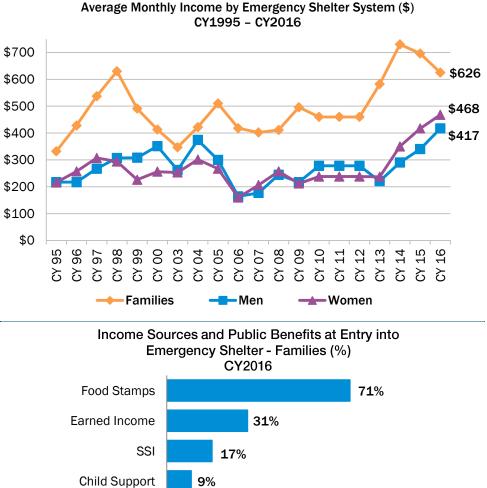

The average number of service instances for households who exit successfully versus the households that exit unsuccessfully is fairly similar for all populations, during a 12 month period, with small variations.

Food assistance is the public assistance benefit most prevalent for families served in the crisis response system Thirty-one percent of households receive employment income, a 4 percentage point decrease compared to CY2015.

*Successful housing outcomes include permanent exits to family.

Veterans

This section covers homeless veterans who accessed emergency shelter, transitional housing, and outreach programs during CY2016, providing a comparative analysis with prior calendar years.

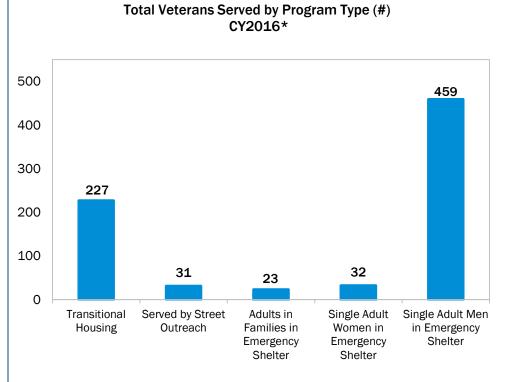

Veterans Served by Program Type

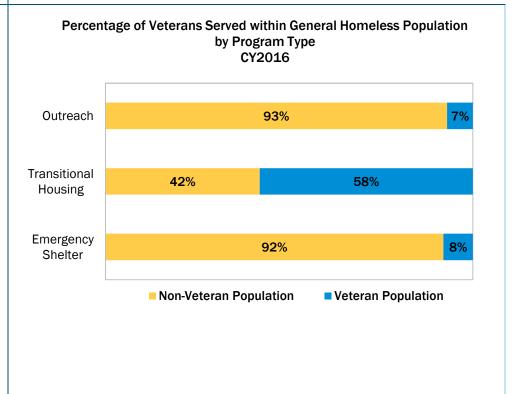

Single adult veteran men in emergency shelter represent 11 percent of the single adult men in the general homeless population. Fifty-eight percent of individuals in transitional housing were veterans. When looking at veterans' participation independent of their progression through the different program types. the number of individuals served shows an expected increase. About 77 people served by emergency shelters moved to another program type and 15 individuals served by outreach moved to other program types. For transitional housing, 39 people moved to other program types, mostly emergency shelters.

Veterans and the General Population

When looking at veterans served by each program type during CY2016, 7 percent of individuals served by outreach, 58 percent of individuals served by transitional housing, and 8 percent of individuals served by emergency shelters were veterans. The high concentration of veterans in transitional housing is reflective of the high turnover in the 40 bed transitional housing program dedicated to veterans.

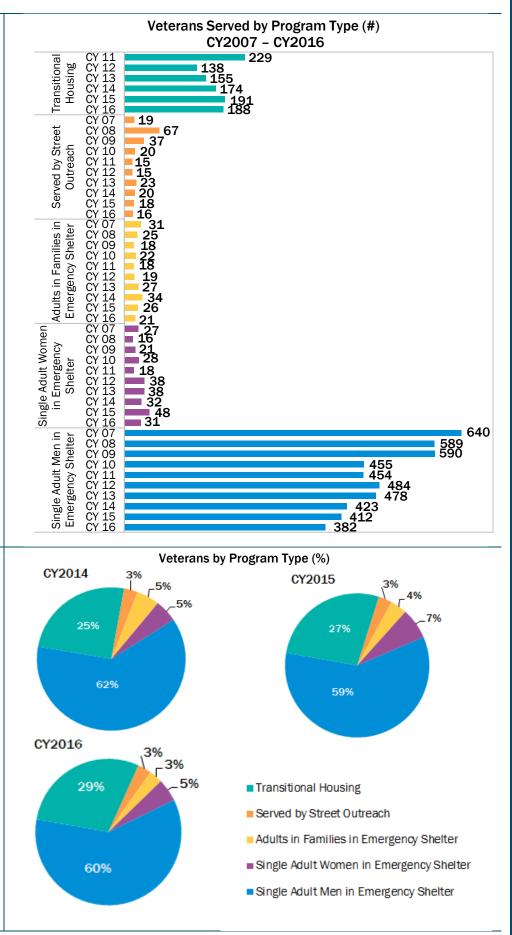

*Veterans are counted once in each program type they participated in during CY2016.

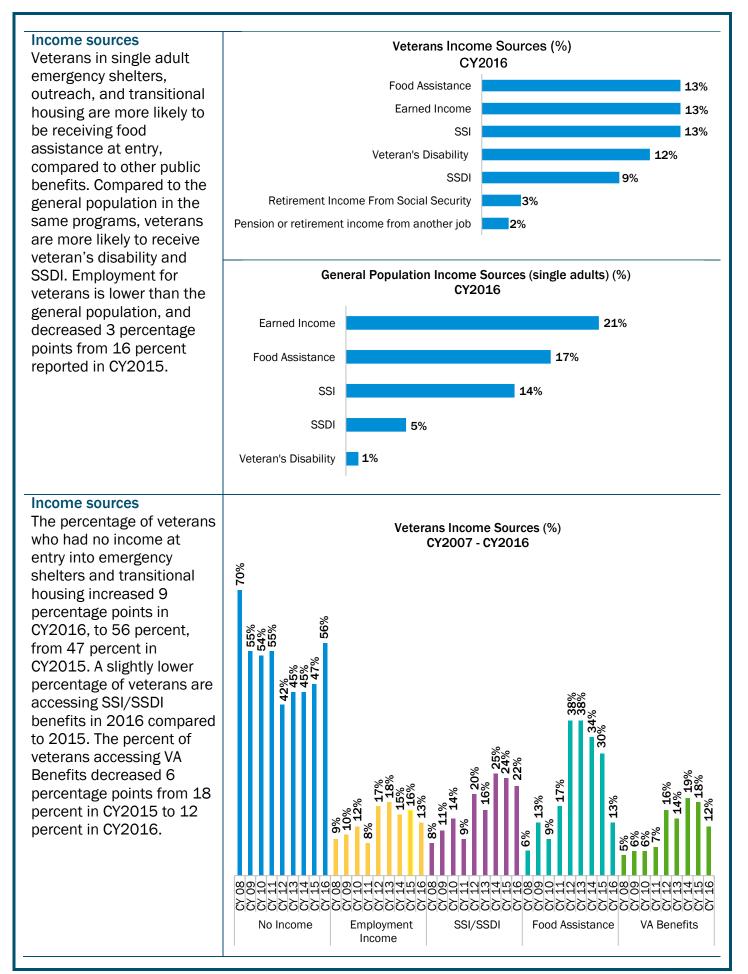

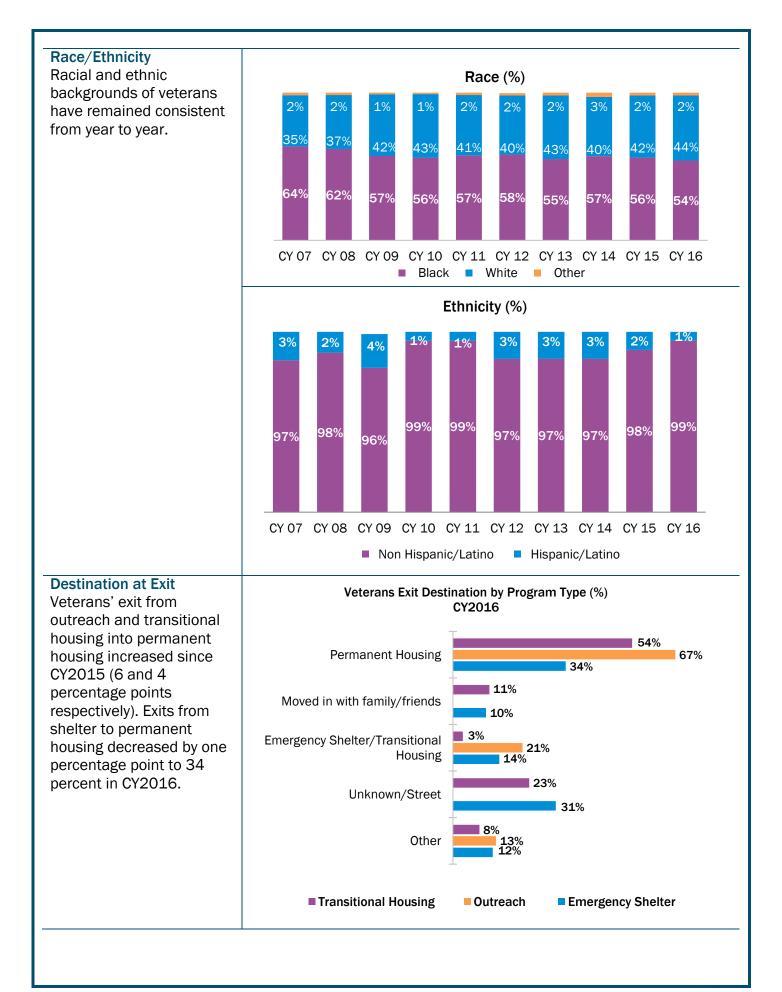

Veterans Served by Program Type

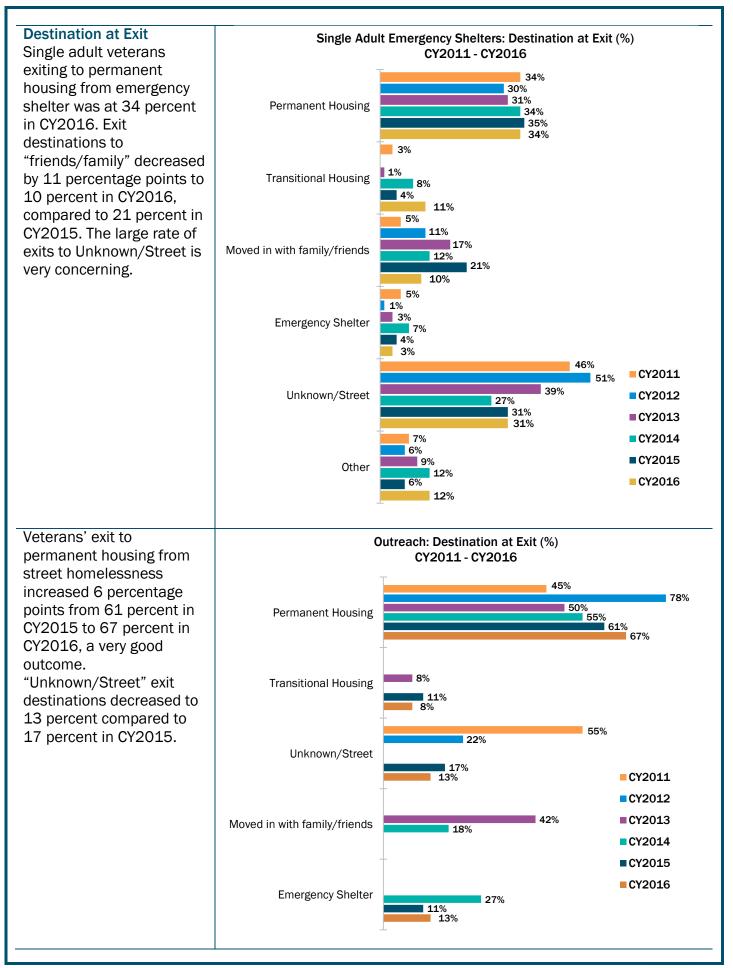

The number of veterans served in single adult shelters decreased by 10 percent since the previous year. Overall the number of veterans in single adult shelters has decreased by 38 percent since CY2007. The number of veterans served by outreach and the family emergency shelters remained low. The number of veterans served in transitional housing decreased by 2 percent compared to CY2015, even though the transitional housing capacity dedicated to veterans remained unchanged (40 beds).

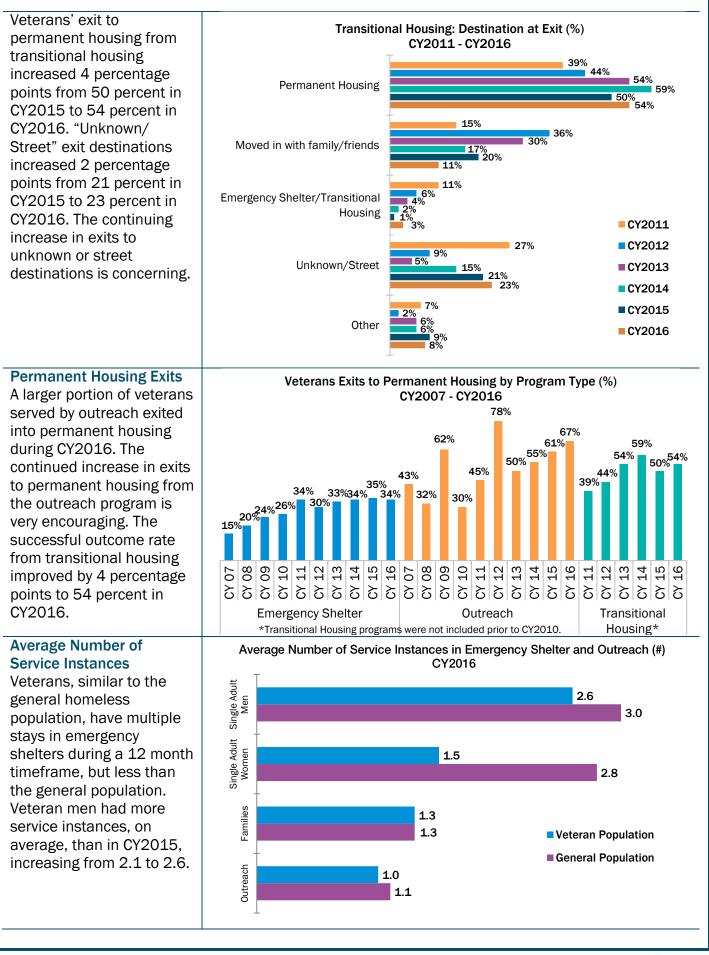

The charts show the percent of veterans served within each program type in CY2016 compared to CY2015 and CY2014. The majority of veterans served utilized shelters for single adult men and the ratio has been around 60 percent for the past 3 years.

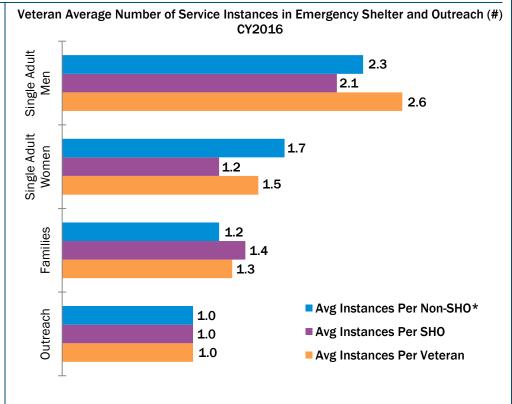

Service Instances by Exit Type

Veterans who have a successful exit from a homeless program have an average of 1.9 service instances for all subpopulations. This is similar to the general homeless population (2.2 service instances).

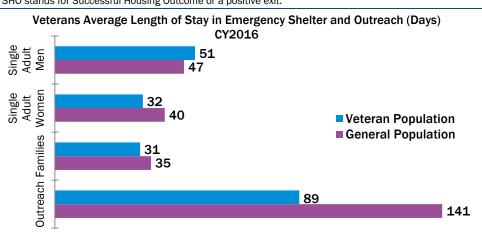

*SHO stands for Successful Housing Outcome or a positive exit.

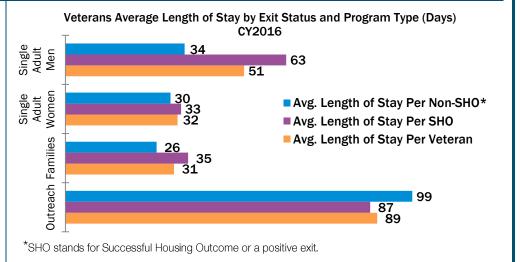

Average Length of Program Stay

In CY2016, veterans that were served in single adult women or family shelters, and unsheltered veterans spent less time in a homeless program than the general homeless population. Single adult men spent on average 3 days more in shelter than the general population.

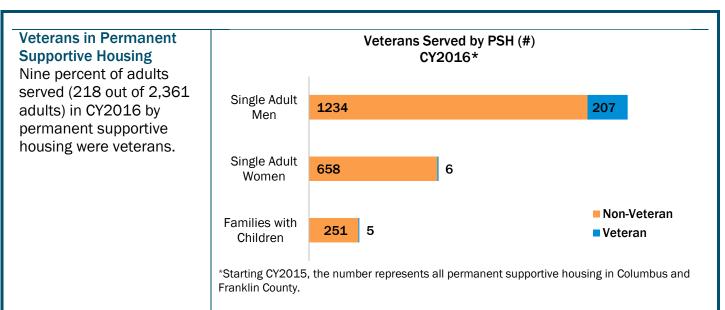

Average Length of Program Stay by Program Type

Time in the program was higher if the outcome was a successful exit for single adult men, women, and families. The opposite was observed for unsheltered veterans.

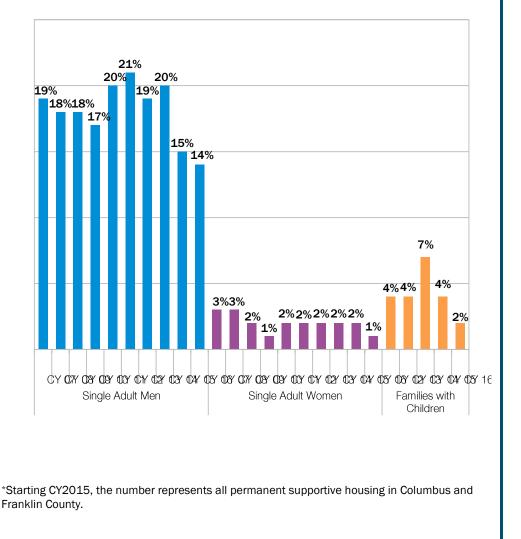

communityshelterboard

Veterans in Permanent Supportive Housing

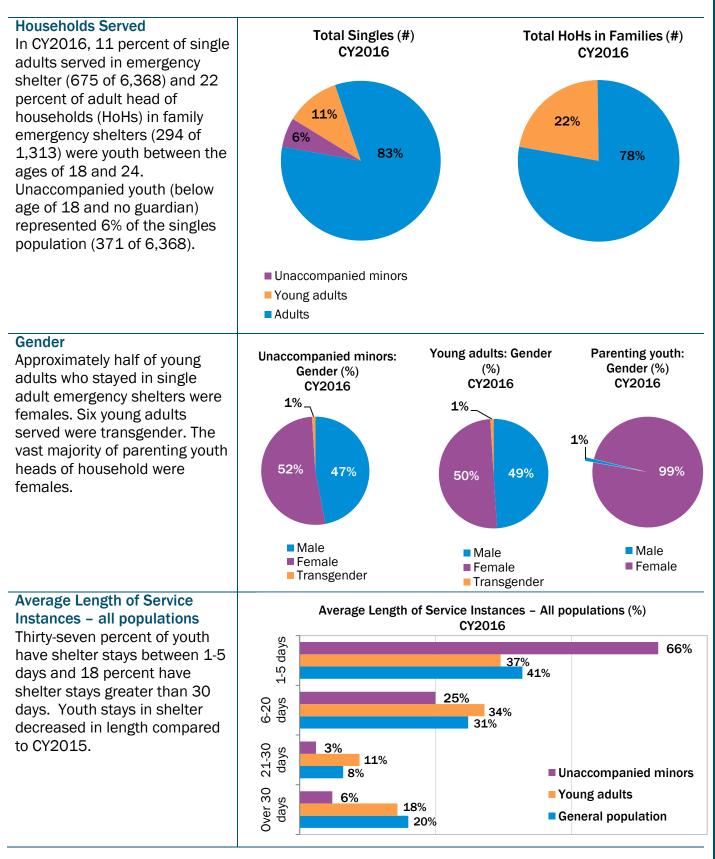

The composition of the veteran population served by permanent supportive housing remained consistent from CY2007 to CY2016. The majority of veterans served in permanent supportive housing were single adult men, representing 14 percent of the general permanent supportive housing population. This rate seems lower than in previous years partially due to the inclusion of the nonrebuilding lives population in the calculation.

Youth

This section covers the youth population who accessed emergency shelters during CY2016.

Average Length of Service Instances - Single Adults

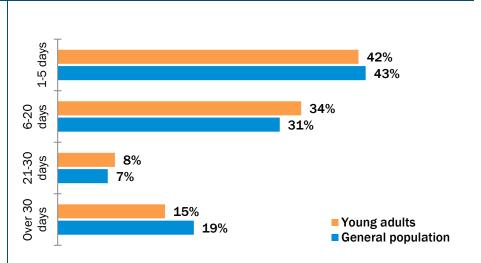

Forty-two percent of young adults have shelter stays between 1-5 days. Fifteen percent of young adults have shelter stays greater than 30 days. Young adults have approximately the same emergency shelter stay pattern as the general homeless population, but with a tendency to stay fewer days.

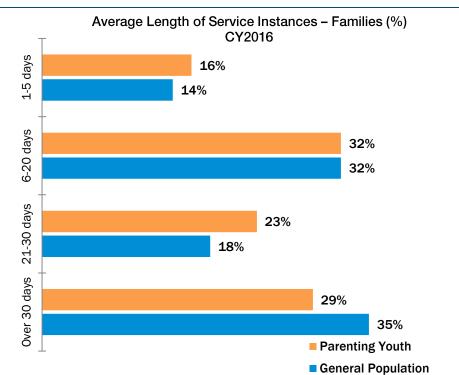

Average Length of Service Instances - Families

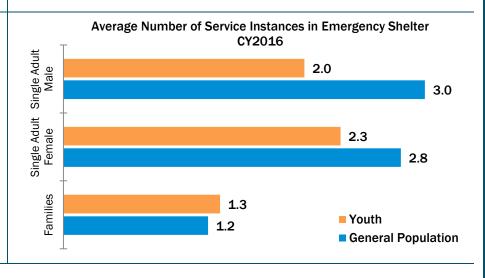

Sixteen percent of parenting youth exit shelter within 1-5 days. Parenting youth are more likely to have a brief (<6 days) stay in shelter and less likely to have an extended (>30 days) stay than the general population. However, when compared to CY2015, the rate of parenting youth that stayed in shelter over 30 days increased by 4 percentage points. The increase over two calendar years is 11 percentage points. In general, families stay longer in shelter than in previous years.

Service Instances

Youth, similar to the general homeless population, have multiple stays in single adult emergency shelters during a 12 month time frame. However, youth of both sexes have fewer single adult service instances than the general population, but more than they had in CY2015.

Annual Point-in-Time Count of Persons Who Are Homeless

"Point-in-Time"

Imagine surviving without a home in the winter, constantly fighting the elements. Although this is reality for a number of men and women, the good news is that Columbus assures availability of shelter during winter months. In CSB's eleventh annual "Point-in-Time" count of people experiencing homelessness, 80 percent of all persons counted in Columbus and Franklin County were sheltered.

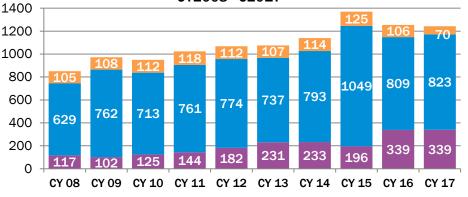

The U.S. Department of Housing and Urban Development (HUD) requires local communities to conduct a point-in-time count of sheltered and unsheltered persons experiencing homelessness at least once every two years. The HUD requirement to count homeless persons helps HUD and local communities assess gaps in homeless housing and service programs.

The latest count was conducted on January 25, 2017. Our community counted 1,691 homeless individuals including households comprised of only children. The number of people experiencing homelessness on a single night decreased by 33 clients (2 percent) when compared to January 2016 (1,724).

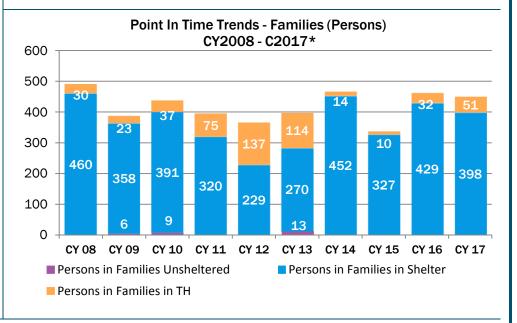

Twenty percent of this population was found to be unsheltered, sleeping outside in places not meant for human habitation. The number of unsheltered individuals remained nearly the same when compared to 2016. Seventythree percent of people who were homeless on the single night of the point-in-time count were single adults. Twenty-seven percent were in families. 1800 1600 1400 1200 1000 1238 1221 1376 1245 800 1007 1089 1120 1104 1081 1003 600 400 200 339 339 244 233 196 182 144 134 108 0 CY 08 CY 09 CY 10 CY 11 CY 12 CY 13 CY 14 CY 15 CY 16 CY 17 Total Unsheltered Total Sheltered Total Transitional Housing

*10 unaccompanied youth were not included in the chart, for consistency with prior years.

Avg. Households Served per Night	118	118	120	105	104	60	82	98	93	107

¹Shelter unit = one person sheltered for one night.

² The number of adults plus number of children will not necessarily equal Individuals in Families. This is because the former categories are dependent upon an age calculation, which requires a valid date of birth.

10

00

09

³ Excludes Huckleberry House youth shelter.
