¹ Average Financial Assistance includes CSB funding only.

² Eleven clients excluded from average length of stay calculation due to YIHN Exit Date preceding FHC Entry Date.

³ Successful Housing Outcomes includes successful shelter outcomes.

^{*}Because Maryhaven Outreach has been experiencing difficulty in obtaining clients' signatures on the HMIS release forms, the number of households served obtained from the HMIS does not reflect the actual number served. CSB is currently working with Maryhaven to to identify a viable solution for this problem.

*Evaluative time frame is year to date.

Community Shelter Board Continuum of Care System and Program Indicators Report Evaluation Definitions and Methodology – FY06

The Evaluation Definitions and Methodology document incorporates methodologies that are applicable to all variables contained within the Continuum of Care System and Program Indicators Report.

The FY2006 Continuum of Care System and Program Indicators Reports monitors the current shelter, services and permanent supportive housing programs in Columbus and Franklin County using CSB's established performance standards. The report evaluates each program based on a program goal, actual performance data, variances, and outcome achievements.

Agency performance outcome goals were compared with actual performance to determine consistency with CSB standards. All data generated from the Homeless Management Information System and used in the report met CSB quality assurance standards, which require current and accurate data and a 95% completion rate for all required HMIS data variables. The CSB Homeless Census Report, a standard CSB report that is produced using Crystal Reports, constitutes the data source for the CSB-funded emergency and inebriate shelters. The following information provides an explanation of specific definitions and methodologies used in our evaluations.

1. Average CSB Direct Client Assistance (DCA) Amount per Household (Direct Housing and **Transition Program)**

Source:

CSB Direct Client Assistance Report

Defined:

The average amount of total CSB direct client assistance received per household during the period. Note: cumulative total for households with

multiple instances of service during the period.

Calculated:

\(\tag{Total monetary assistance awarded to all households} \) / total number of

distinct households that received assistance.

2. Average Length of Stay

Family Housing Collaborative (FHC)

Source:

HMIS Custom Report

Defined:

The average number of days that total distinct households were served from

the point of FHC entry date to YWCA Family Center exit date. Note: Families who had an FHC entry date after their YWCA Family Center exit date are

excluded from this calculation.

Calculated:

Σ(YWCA Family Center exit date – Direct Housing entry date) / the number of total distinct households served and exited from program during the period

Direct Housing;

CSB Direct Client Assistance Report for CSB Transition

Defined: The number of distinct households served by the program during the

evaluation period. Distinct households served are identified by their last service record for the program entered into HMIS as of December 31, 2005. Note that clients served equals households served for Permanent Supportive

Housing.

Calculated: The number of distinct households served, based on the last service record

for the program as of the end of the period.

4. Housing Stability

Source:

HMIS Custom Report

Defined:

The average length of time measured in months that distinct clients reside in the Permanent Supportive Housing unit. Measure is not calculated for those

programs undergoing full lease up.

Calculated:

Step 1: Calculate the total days housed for each client by subtracting the

Entry Date from the Exit Date or end of period for all records.

Step 2: Determine the average length of stay for all the clients by dividing the

sum of total days housed by the number of clients served.

Step 3: Divide the average length of stay by 30.5, which is the average

number of days in a month.

Housing stability is measured using the total average client length of stay (from intake to exit date or 12/31/05, if still a resident) divided by the total

average days per month (30.5 days).

5. Occupancy Rate

a. Permanent Supportive Housing

HMIS Custom Report

Defined:

A percentage that reflects the average number of clients residing in a

program per night relative to the program capacity.

Calculated:

Number: \(\sum \) (exit date or end of period – entry date or beginning of period) /

days in period

Rate:

Step 1: Σ(Exit date or end of period – entry date or beginning of period) /

(total units x days in period)

Step 2: Divide the results calculated in Step 1 by the program capacity

b. Emergency Shelters

Note: Evaluated only for Tier II Emergency Shelters; monitored but not evaluated for Tier I Shelters

HMIS ShelterPoint Bedlist Report

Defined:

multiple instances of service during the period.

Calculated:

Number: Total bedlist shelter units for the period / total days during the period

Rate:

Step 1: Divide the total bedlist shelter units for the period by the number

of days in the period.

Step 2: Divide the results obtained in Step 1 by the program capacity.
